

COMPANY PROFILE

Proven Expertise in Data and Information Security

Why di8it

Di8it is an information security consultancy having specialization in Offensive, Defensive and Advisory Security Services. We also offer state of the art Cyber Security Solutions.

Founded in 2015, Di8it began its journey with an aim to provide assurance that can be mapped to the financial value to justify cost.

As an information security specialist, Di8it cut through the oddities that can obstruct the velocity of work. We integrate velocity driven engineering in an agile and responsive manner.

**Offensive
Security is the
best defense!**

Why Choose Us!

Di8it brings unparalleled expertise and understanding of the latest security threats to expose vulnerabilities, perform threat intelligence and identify kill chain to ensure that our client's assets and information security are well protected.

Digit team evaluates implemented controls and security measures effectiveness against an intrusive attempt aiming to exploit cyber defense of an organization.

STRATEGIC ALLIANCES

Di8it provides wide range of Cyber Security Solutions including privileged and remote access management, database encryption, database security monitoring, SOAR, threat intelligence, datacenter security and vulnerability management.

SERVICES

Di8it provides security services and integrated security solutions according to the specific requirements of our customers.

Di8it is a trusted cyber security advisor for industry leaders operating in diversified sectors. We take great pride in our emergent reputation as a sophisticated corporate security service provider and increasing dependence of customers on our expertise.

OFFENSIVE SECURITY

- Web App Penetration Testing
- Mobile App Penetration Testing
- Network Penetration Testing
- Red Team Assessment
- Breach and Attack Simulation
- Social Engineering Security Assessment

DEFENSIVE SECURITY

- Threat Hunting Assessment
- Compromise Assessment

ADVISORY SECURITY

- Network Architecture Review
- System Hardening & Configuration Review
- Risk Assessment & Compliance
- Cyber Assessment and Security Maturity

ELEARN SECURITY

- eLearn Security Certification
- eLearnSecurity's Innovative Training Courses

Offensive Security

Offensive security is the best defense! At Di8it, our top tier security experts understand how attackers operate and plan an attack to gain access to an organization's most sensitive information.

Automated application and network penetration testing tools might be great for preliminary scans but often fail to identify more subtle security flaws, associated risks and less obvious weaknesses which usually attackers look for first. At Digit, we provide offensive security services that are more relevant and comprehensive.

Di8it focuses on further exploring the core processes of your application or network and then looks for exploits that aren't easily visible. Our expertise helps us develop a better understanding of your specific security needs.

Web App Penetration Testing

Effective Security Control to measure web application security

Stay ahead of your adversaries with Di8it web application testing service which is based on the Open Web Application Security Project® (OWASP).

Security experts at Di8it evaluate every aspect of your web application including business logic, technology and controls from an attacker's perspective with an aim to gain access to your sensitive data.

Mobile App Penetration Testing

Avert your mobile apps & API threat exposure from a potentially disastrous data breach

Our Extensive static, dynamic and source code penetration testing service is supporting both iOS and Android Platforms.

With significant experience of working on both iOS and Android, Di8it team understands critical vulnerabilities and challenges associated with each platform and mobile architecture.

Network Penetration Testing

Know thy network to measure your on-premises and cloud threat exposure

Your organizational network is only as secure as your infrastructure's weakest link.

Di8it's network penetration testing service imperatively perform structured network-based penetration testing across an organizational network asset with an aim to analyze and detect weaknesses before they can be exploited to attain access to your sensitive data with malicious intent.

Reporting Practices

Di8it believes that communication and documentation are key for the success of any security project. An organized and detailed security assessment report guarantees successful implementation of remediation efforts.

At Di8it, we are proud of our professional, refined and detailed documentation for customers through our exclusive Reporting Engine.

Red Team Assessment

Targeted assessments for mature security teams

While traditional penetration tests are a great way to find inherent security weaknesses in a system within a predetermined scope, nothing tests your security better than an advanced, highly-targeted red team engagement.

Red Team engagements consist of sophisticated simulations of advanced, multi-vector cyber-attacks with the sole purpose of breaching your security and compromising specific targets or flags.

Breach and Attack Simulation

Test your security resilience with real-world breach and attack simulations

Organizations intend to ensure that adequate security and controls are implemented which does not disintegrate in the face of a committed, deliberate intrusion attack.

Di8it examines your network and security infrastructure as an attacker, finds the weakest link in your enterprise security, and performs attack simulations in an uncontrolled environment.

Social Engineering Security Assessment

Deceptive social engineering attacks to assess your organization's cyber security posture

Di8it possesses targeted and focused spear phishing capabilities to identify the vulnerabilities in the human chain.

Social engineering attacks are extremely focused, targeted and well-coordinated. Di8it has designed a range of tests and methodologies to compromise a target personnel and gain access to sensitive data.
